Sajal Kumar

Education

CMR Institute of Technology

Bachelor of Engineering in Information Science & Engineering, CGPA: 8.5/10

Bengaluru

Dec. 2022 - June 2026

Relevant Coursework

Data StructuresSoftware Engineering

• Algorithms Analysis

• Database Management

Distributed SystemsComputer Organization

• Operating Systems

• Computer Networks

Projects

STRbook | React, Node.js, PostgreSQL | STRbook

May 2024 - Present

- Developed **STRbook** to digitize student transformation records, replacing traditional physical record books reducing manual data entry by 80%, using **React** for the frontend and **Node.js** with **Express** for the backend, for use by college.
- Implemented a robust user authentication system using JSON Web Tokens (JWT), ensuring secure access to the application for both students and teachers while adhering to best security practices.
- Designed RESTful APIs for CRUD operations on student data, ensuring scalability and efficient data management.
- Integrated a PostgreSQL database to store student records, optimizing queries for performance and efficiency.
- Automated CI/CD pipelines using Jenkins, enabling smooth deployment and high system availability, while implementing performance optimizations in the backend system to ensure scalability and operational efficiency for student data

ordo | Go, Docker SDK, BoltDB, RESTful API | Octo

Oct. 2024

- Built a distributed **container orchestration** system, to manage large-scale applications across clusters, focusing on scalability and fault tolerance.
- Implemented a modular architecture with Go interfaces, enabling customizable scheduling algorithms, including a custom-built Enhanced PVM (Parallel Virtual Machine) scheduler for optimized resource allocation.
- Designed and implemented **RESTful APIs** for both worker and manager nodes, enabling programmatic control and interaction with the orchestration system via standard HTTP clients.
- Migrated from an in-memory datastore to **BoltDB** for persistent data storage, enhancing **data integrity** and ensuring reliable system recoverability post-restart.

raftly | Java, Maven | 😝 raftly

Nov. 2024

- Implemented the fault-tolerant Raft Consensus Algorithm in Java for reliable log replication and leader election across distributed nodes, ensuring high availability and consistency in distributed systems.
- Created a state machine to apply commands from replicated logs, ensuring consistent operations across the cluster.
- Developed efficient inter-node communication protocols to handle **RPCs** (**Remote Procedure Calls**) and log entries, enhancing cluster reliability.
- Conducted thorough testing to validate algorithm performance under network partitions and node failures.
- Set up monitoring with **Prometheus & Grafana**, gathering metrics for node health, leader status & visualizing cluster performance

EndlOS | C, x86 Assembly | \bigcirc EndlOS

April 2024

Bengaluru

- Developed a minimalist operating system from scratch in $\bf C$ and $\bf x86$ Assembly with a custom bootloader, transitioning from 16-bit to 32-bit modes and implementing memory management.
- Built a priority-based task scheduler for managing concurrent processes and enabling low-level inter-process communication.
- Designed a modular graphics and window management system with object-oriented design, utilizing **QEMU** for cross-platform testing and a **Makefile**-based build system for efficient compilation.

Experience

Core Technical Team

Aug 2023 - Nov 2024

• Developed a minimal website for the club using React, Golang, and Firebase, enabling seamless updates for club activities.

• Led technical events such as "Introduction to Golang" and "Introduction to Web Security", fostering skills in web development and cybersecurity among participants.

Extracurricular Activities

Google Developer Student Club, CMRIT

LeetCode: Solved 150+ problems; consistently ranked in the top 20% in rated contests.

Hackathons: Won two college-level hackathons, collaborated with team members to solve real-world problems.

Homelab: Managing a home lab environment running multiple virtual machines, Kubernetes clusters, and services like Docker, Prometheus for monitoring, and Nginx for reverse proxying.

Linux Ricing: Active in Linux ricing, customizing and optimizing Linux environments to enhance system performance, usability, and aesthetics through advanced configurations and scripting.

Technical Skills

Languages: C/C++, Java, Go, Python, PowerShell, Bash, JavaScript, HTML/CSS, SQL, LaTeX

Frameworks & Libraries: React, Node.js, Express

Developer Tools: Unix, Linux/WSL, Docker, Kubernetes, Git/GitHub, Firebase, Jenkins

Certifications

AWS Cloud Practitioner Essentials October 2024, Coursera
